

Achieve the Highest Standard of Swimmer Safety With The Latest Version of Swimguard

Introducing SWIMGUARD Edge . . .

Launched in January 2023 and is the latest version of the SwimGuard brand which was first launched in 1998. Using state of the art Computer Vision Technology combined with Artificial Intelligence, SwimGuard Edge provides a very high level of swimming pool safety.

SwimGuard Edge is specifically designed for pools that do not always employ full time lifeguards. It is affordable as an outright purchase, or can be adopted using our Software as a Subscription Model. Installation causes no disruption to normal operations and is usually operational within 10 days.

SwimGuard Edge simulates the scanning procedures of a lifeguard which includes continuous headcounts. All swimmers are monitored simultaneously and if a person requires assistance, an alert is delivered via a paging system generated within 15 seconds giving ample time for a responder to provide assistance.

SwimGuard Edge monitors all swimmers for behaviour patterns and the position of the head in relation to the water surface. When it comes to saving lives, the earliest detection of a person in difficulty is vital.

SwimGuard Edge is a Smart System and as such, can be integrated with all social media channels including WhatsApp, Telegram and Google Suite. This is useful for multi-site operators so selected personnel can always receive alerts or system reports.

SwimGuard Edge has a very low energy usage, is simplistic in operation and will easily integrate easily into current pool operating procedures.

Swimguard Edge is suitable for all pool shapes, and can be used for other areas of concern such as spas and bubble pools.

Swimguard Edge is part of a suite of AI based solutions aimed specifically at leisure operators who want to adopt Smart Systems. One such product is Ecotroniq - a circulation pump interface which lowers energy used saving cash and the planet by reducing the carbon emissions.

"We are delighted with the performance of Swimguard Edge giving us an important, additional layer of safety for all our customers".

Hev Chappelle, Spa Manager, Trenythron Manor
